A Message from the Program Director:

The department's Public Drinking Water Program has an important mission to ensure quality drinking water to every visitor and resident of Missouri by regulating all public water systems. This report has been created to let readers know how water systems in Missouri are performing. This report covers calendar year 2001 and is the sixth Annual Compliance Report the program has produced. It will be sent to the U.S. Environmental Protection Agency where it will be included in a national report summarizing and evaluating the nation's drinking water supplies.

In 1974, Congress passed the Safe Drinking Water Act, the first national legislation regulating drinking water. Under this law, states are allowed to seek primacy, or approval from EPA to administer a Public Water System Supervision Program. In order to receive primacy, states must meet certain requirements laid out in the Safe Drinking Water Act and must adopt drinking water regulations at least as stringent as federal regulations and demonstrate they can enforce the requirements. Missouri was granted primacy in early 1970s.

This report details the violations committed by Missouri public drinking water supplies in an effort to inform readers and focus attention on the importance of quality drinking water.

Jerry L. Lane
Director
Public Drinking Water Program

The Missouri Public Water System Universe

A Public Water System (PWS) is defined as a system that provides water through piping or other constructed conveyances for human consumption to at least 15 service connections or serves an average of at least 25 people for at least 60 days each year. Water testing at systems serving fewer people than this is facilitated by local and county sanitarians and the Missouri Department of Health and Human Services, rather than the Department of Natural Resources. There are three types of PWSs. PWSs can be community (such as towns, subdivisions or mobile home parks), non-transient non-community (such as schools or factories) or transient non-community systems (such as rest stops or parks). The requirements for construction, operation, monitoring, etc., vary among systems based on their type, size and source of water.

The time period covered by this Annual Compliance Report is calendar year 2001. In 2001, there were 2,759 active PWSs in Missouri. Of this total, 1,451 were community, 256 were non-transient non-community and 1,052 were transient non-community systems.

The community water systems in Missouri served over 4.8 million citizens in 2001. These citizens benefit from one of Missouri's most outstanding resources: its water. There is generally a large quantity of good quality water in Missouri. By far the largest source of drinking water for Missourians is the Missouri and Mississippi River system. The abundant supply of water in these rivers and the proximity to the state's major population centers make the use of the big rivers as a source so popular. Groundwater is the next most used source of drinking water for Missouri's community supplies. This is especially true in southern Missouri where good quality groundwater is easy to obtain and requires very little treatment to be used for drinking water.

Analysis of Compliance by Public Water Systems in 2001

We expect a lot from our public water systems and require testing for as many as 90 different regulated chemicals and microbiological contaminants during the year. A system is to be applauded for performing all required testing and meeting all maximum contaminant level (MCL) standards. When MCL violations do occur, that identification of a problem can be the first step in correcting it. Many public water systems perform testing beyond that required by the state.

The Summary of Violations tables are counts of individual violations. Appendices A through D list specific systems in order of their county of location. Because there are multiple regulations involved and some monitoring is on a monthly schedule, each PWS has the potential to accumulate multiple violations during the year. For example, the monitoring requirements for the Total Coliform Rule alone create a potential for over 32,000 violations. This puts some perspective on the violation figures shown in the tables. Another factor is the number of systems that have violations. Many of the violations are from water systems with problems that result in multiple violations during the year, while other systems may only have one or two violations. The department uses various methods to focus in on the water systems that need attention.

The Missouri Department of Natural Resources and the U.S. Environmental Protection Agency (EPA) use a process called Significant Non-Compliers or SNCs to focus attention on the water systems with problems that are considered significant. These are the systems with serious violations that potentially affect public health or multiple monitoring violations. Appendix D gives the list of Significant Non-Compliers. Some of the systems listed, however, may have already resolved these problems.

During 2001 there were only 120 systems on the SNC list. That means that 2,639 of the 2,759 PWSs in Missouri were not significant violators. Those systems listed typically serve a small population.

The violations representing the most potential impact on public health (MCLs and treatment techniques) were identified in only a small number of the public water systems, serving a very small percentage of the population.

The percent of the population served by community water systems that meet all of the health-based standards is at the national target of 95 percent set by EPA for 2005. Since 1996, when the first Annual Compliance Report was produced, the results for Missouri have been consistently at or above this target even though they may vary slightly from

year to year. While we can probably never reach 100 percent, the Missouri Department of Natural Resources' Public Drinking Water Program works closely with water systems to make sure any contamination incidents are addressed quickly and that long term solutions are put in place to protect the health of Missouri's citizens.

While the quality of Missouri's drinking water has not really declined, the percentage for this standard has decreased. This is due to the adoption of a new more sensitive test for coliform bacteria that will detect more "stressed" organisms. While these probably don't indicate an increase in health risk, they have caused an increase in the number of total coliform MCL violations. Total coliform bacteria serve as a broad indicator that disease-causing organisms may be present. Total coliform are common in the environment and generally not harmful by themselves. If a sample tests positive for total coliform, further testing is then performed for fecal coliform or *E. coli* bacteria, microorganisms that can directly cause acute gastrointestinal illness. These are the most serious problems and the resulting acute coliform MCL violations require a boil order be implemented by the water system. Most samples that test positive for total coliform test negative for fecal coliform or *E. coli*, as indicated by the much smaller number of acute violations. In fact the number of acute violations, where fecal contamination was confirmed, has gone down for 2001 even though the number of total coliform MCLs nearly doubled. The vast majority of MCL and monitoring violations were for failure to meet the requirements of the Total Coliform Rule. All public water systems in the state must test for this type of bacteria

every month they dispense water to the public. Monitoring violations are by far the most common. The department is particularly concerned when monitoring violations occur at public water systems that have a history of bacteriological contamination. Adequate testing is the only way to know for sure if the problems have been corrected or have reoccurred.

The Public Drinking Water Program reports the following for the year 2001 in comparison to 2000 for the Total Coliform Rule:

Major monitoring violations decreased 12 percent from 1,111 to 983.

MCL violations for total coliform bacteria increased 75 percent from 406 to 711.

Acute MCL violations for fecal coliform/*E. coli* decreased 38 percent from 55 to 34.

The phrase “know before you go” can apply to domestic as well as foreign travel, as compliance with drinking water regulations was significantly worse than average for transient non-community systems, so named because they do not typically serve the same people on a daily basis. This type of water system includes restaurants, resorts and campgrounds with their own wells. In 2001, transient non-community systems accounted for 38 percent of all water systems in the state, but had 63 percent of major monitoring violations, 44 percent of the non-acute MCL violations for total coliform and 56 percent of the acute violations for fecal coliform or *E. coli*.

Water districts, a type of community system, had a better than average record for compliance with the same regulation. In 2001, water districts accounted for nine percent of all public water systems in the state, but had only two percent of the major monitoring violations, six percent of the non-acute MCL violations for total coliform and two percent of the acute violations.

Only one percent, 33 out of the 2,759 public water systems in the state, had a total of 34 acute violations for fecal coliform or *E. coli* in 2001. So while these acute violations can be serious, they are rare. Additional good news is that for most of these violations, there were no reports of illness. A possible reason for this is that microorganisms were not present in large enough numbers to cause infection in most people.

Some people, however, may be more vulnerable to water-borne illness than the general population. To educate the public on this issue, all community water systems are required to make their fourth Consumer Confidence Report (CCR), covering calendar year 2001, available to customers by July 1, 2002. Each report must include the following warning:

“Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA and CDC (national Centers for Disease Control and Prevention) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.”

The CCR provides detailed information about the specific water system, while this report does not. Much of this Annual Compliance Report contains statistics and summary information with detailed listings of health-related and chronic monitoring violations. The majority of systems do not have violations and are therefore not listed. The CCR provides customers with information about drinking water and health and specifics about the water system, such as the source of drinking water. The levels of substances that are typically naturally-occurring in drinking water are also given; usually these pose no health threat and are not violations. If there are any violations of state and federal requirements for that year, they must be listed. Customers of larger water systems had an individual report mailed to them or saw the CCR published in the local newspaper. The largest systems, those serving 100,000 people or more, must post their CCRs on the Internet. Smaller water systems may have posted the CCR in their office or public building. Over 90 percent of the state's community water systems are complying with the requirement to produce and distribute the CCR. Anyone can request a copy of their CCR from the public water system or by calling the department's Public Drinking Water Program at 1-800-361-4827 or (573) 751-5331.

Compliance Activities - Preserving the Quality of the Drinking Water

The Missouri Department of Natural Resources works closely with violators to return them to compliance in a timely manner. This includes phone contacts, on-site inspections, meetings with owners or operators and technical assistance as needed. For the more serious violations, a bilateral compliance agreement between the water system owner and the department is the tool generally used to move the system back into compliance. Should a water system fail to meet the provisions of that agreement or continue to violate drinking water regulations, more formal enforcement actions, such as legal action through the courts, may become necessary.

The department also provides training and technical assistance in an effort to prevent the occurrence of violations. Training is routinely provided to operators and owners of public water systems around the state, primarily concentrating on the basic principles of running a water system, performing the required monitoring and avoiding contamination of the system. Technical assistance in the form of phone contacts and on-site visits is also available to help water system operators avoid or correct problems. Most of these activities are carried out by staff in the six Water Protection and Soil Conservation Division regional offices.

For all violations, public water systems are required to notify the consumers they serve. The department provides all public water systems with the necessary forms and information to effectively notify the public. The method of notification varies by the violation and system type. Systems must then report back to the department how the public notice was performed. Some violations, such as the confirmed detection of fecal coliform bacteria or *E. coli*, warrant more immediate action due to the threat to public health. For such acute violations, the department requires systems to immediately notify customers to boil water before consumption. Boil water orders remain in effect until the problem has been corrected and the water is safe to consume.

For Further Information

Information regarding the contents of this report or related data on Missouri's public water systems can be obtained by writing to the Missouri Department of Natural Resources, Public Drinking Water Program, P.O. Box 176, Jefferson City, MO 65102 or calling 1-800-361-4827 or (573) 751-5331. You can also visit the department's Web site at www.dnr.state.mo.us/wpscd/pdwp.

Subtotal						128	128

¹Values are in milligrams per liter (mg/l), unless otherwise specified.

²Number of violations for failure to perform sanitary survey under the Total Coliform Rule.

³Includes violations originating in prior years. Not comparable with Annual Compliance Reports figures from 1999 and before.

⁴Public Notice forms were sent with all violation notices for the Total Coliform Rule. Of the 1,951 sent out, some kind of public notice had been reported back to the department for 852 at press time. The department directly performed public notice for 347 violations out of this group of 852 by listing chronic monitoring violators on state-wide news releases.

⁵Violations for failure to produce and distribute a Consumer Confidence Report for calendar year 2000, the most recent report due.

Definitions for Summary of Violations Table

The following definitions apply to the Summary of Violations table.

Filtered Systems: Water systems that have installed filtration treatment [10 CSR 60-4.055].

Inorganic Contaminants: Non-carbon-based compounds such as metals, nitrates, and asbestos. These contaminants are naturally-occurring in some water, but can get into water through farming, chemical manufacturing, and other human activities. DNR has established MCLs for 15 inorganic contaminants [10 CSR 60-4.030].

Lead and Copper Rule: This rule established national limits on lead and copper in drinking water [10CSR 60-15.010]. Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures. States report violations of the Lead and Copper Rule are reported for the following six categories:

Initial lead and copper tap M/R: A violation where a system did not meet initial lead and copper testing requirements, or failed to report the results of those tests to the State.

Follow-up or routine lead and copper tap M/R: A violation where a system did not meet follow-up or routine lead and copper tap testing requirements, or failed to report the results.

Treatment installation: Violations for a failure to install optimal corrosion control treatment system or source water treatment system which would reduce lead and copper levels in water at the tap. [One number is to be reported for the sum of violations in both categories].

Lead service line replacement: A violation for a system's failure to replace lead service lines on the schedule required by the regulation.

Public education: A violation where a system did not provide required public education about reducing or avoiding lead intake from water.

Maximum Contaminant Level (MCL): The highest amount of a contaminant that DNR allows in drinking water. MCLs ensure that drinking water does not pose either a short-term or long-term health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.

Monitoring: DNR specifies which water testing methods the water systems must use, and sets schedules for the frequency of testing. A water system that does not follow DNR's schedule or methodology is in violation [10 CSR 60-4.010].

States must report monitoring violations that are significant as determined by the EPA Administrator and in consultation with the States. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period. A major monitoring violation for the surface water treatment rule occurs when at least 90% of the required samples are not taken or results are not reported during the compliance period.

Organic Contaminants: Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. DNR has set legal limits on 54 organic contaminants that are to be reported [10CSR 60-4.040 and 4.100].

Radionuclides: Radioactive particles, which can occur naturally in water or result from human activity. DNR has set legal limits on four types of radionuclides: radium-226, radium-228, gross alpha, and beta particle/photon radioactivity [10 CSR 60-4.060]. Violations for these contaminants are to be reported using the following three categories:

Gross alpha: A violation for alpha radiation above MCL of 15 picocuries/liter. Gross alpha includes radium-226 but excludes radon and uranium.

Combined radium-226 and radium-228: A violation for combined radiation from these two isotopes above MCL of 5 pCi/L.

Gross beta: A violation for beta particle and photon radioactivity from man-made radionuclides above 4 millirem/year.

Surface Water Treatment Rule: The Surface Water Treatment Rule establishes criteria under which water systems supplied by surface water sources, or ground water sources under the direct influence of surface water, must filter and disinfect their water [10 CSR 60-4.055]. Violations of the “Surface Water Treatment Rule” are reported for the following categories:

Monitoring, routine/repeat (for filtered systems): A violation for a system’s failure to carry out required tests, or to report the results of those tests.

Treatment techniques (for filtered systems): A violation for a system’s failure to properly treat its water.

Total Coliform Rule (TCR): The Total Coliform Rule establishes regulations for microbiological contaminants in drinking water. These contaminants can cause a short-term health problem. If no samples are collected during the one-month compliance period, a significant monitoring violation occurs. States are to report four categories of violations:

Acute MCL violation: A violation where the system found fecal coliform or E. Coli, potentially harmful bacteria, in its water, thereby violating the rule.

Non-acute MCL violation: A violation where the system found total coliform in samples of its water at a frequency or at a level that violates the rule. For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5% of the samples positive for total coliform violation.

Major routine and follow-up monitoring: A violation where a system did not perform any monitoring. [One number is to be reported for the sum of the violations in these two categories.]

Sanitary Survey: A major monitoring violation if a system fails to collect 5 routine monthly samples if sanitary survey is not performed.

Treatment Techniques: A water disinfection process that EPA requires instead of a MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.

Unfiltered Systems: Missouri has required filtration of all surface water sources for many years. There are no unfiltered surface systems in Missouri and therefore no violations in this category.

Violation: A failure to meet any state or federal drinking water regulation.

APPENDIX A

I. Coliform MCL Violations

A. Acute

The following systems were under boil water orders due to acute MCL violations for fecal coliform or *E. coli* bacteria for the months listed. These acute violations also violate the standard for total coliform bacteria.

County	ID #	System Name	Month(s)	Issue Date	Rescind Date
BENTON	MO3192004	FORTHVIEW RESORT	June	06/21/01	07/31/01

APPENDIX C

Major Repeat Monitoring Violations

The following systems had major repeat monitoring violations for the months listed. A major repeat monitoring violation occurs when a routine sample tests positive for total coliform bacteria and that system fails to submit any follow-up, or repeat, samples as required.

County	ID #	System Name	Month(s)
BENTON	MO3036127	SYCAMORE VALLEY SUBD	September
